Use of DESS LAB Custom Abutments Library in CAD dental systems

DESS LAB Library allows single-piece anatomical abutments to be milled directly on implant connection by our milling center. For the correct scanning and valid stl file creation DESS Scan Abutments and DESS LAB Library are needed. Please note that in case of direct milling all connection measures and values are approximate and therefore can only be milled in our facilities to assure the connection quality. All files are for the implant-level scanning and needs to be performed with the Scan Abutment for the specific implant connection. Take care to select the correct DESS Scan Abutment and the corresponding library file, as otherwise the milled abutment can differ from desired outcome. DESS LAB is not responsible for any errors resulting from improper library file selection. Depending on the CAD system, the library structure and connection names differ slightly from each other.

Implant level scan
